Animal and Meat Production in Ghana—An Overview
ABSTRACT: Animal production is an integral part of Ghana's agricultural economy and a major source of livelihood for many rural families. The data presented will be useful to other stakeholders who use this data in planning and making policies, and to monitor changes that may occur over time.

Key words: Agricultural economy, Animal production, Animal species, Meat production, Ghana.

ABSTRACT: The present study was undertaken to compare different diagnostic procedures for detecting Newcastle disease and Infectious Bursal disease in chickens. The study aimed to identify and validate reliable, sensitive, specific and more accurate methods to detect the viruses for the confirmatory diagnosis of diseases.

Key words: Clinical diagnosis, NDV, IBDV, HI, AGIDT, RT-PCR assay.
Effect of substituting yellow maize for sorghum on broiler performance

Original Article, C3

J. World’s Poult. Res. 3(1):

ABSTRACT:
An experiment was conducted to study the nutritional value of yellow maize when it substitutes sorghum grain as source of energy and protein in the broiler feed. Sixty day-old Arbor Acres meat type broiler chicks were used in this experiment. The experiment lasted for 6 weeks. Feed intake and body weight gain had been recorded weekly. The results showed significant increase in feed intake and body weight gain. Key words: Broiler, Maize, Sorghum, Performance
Seroepidemiological studies on poultry salmonellosis and its public health importance

Rural poultry farming with improved breed of backyard chicken
Original Article, C5
Pathak P.K. and Nath B.G.

ABSTRACT: Livestock and poultry rearing is an imperative factor for improving the nutritional security of rural poor in India. Rural farmers rear Desi type chicken with low egg and meat production in backyard system. For developing the rural poultry farming, improved chicken breeds such as Gramapriya are being introduced with the help of Vanaraja to produce high quality eggs and meat. This initiative helps in making new income source and a solution to food security to the needy villagers paving a way for sustainable agriculture in rural areas of India.

Keywords: Backyard Chicken, Gramapriya, Rural, Vanaraja

A study on Cestode Parasites of Corvus Species of Kashmir, India

Original Article, C6
Ahmad Dar J., Tanveer S., Ahmad Kuchai J. and Ahmad Dar Sh.
J. World's Poult. Res. 3(1): 28-34
ABSTRACT: During the present study, three species of the genus *Corvus* namely *Corvus monedula*, *C. splendens* and *C. macrorhynchos* were collected from different localities of Kashmir valley and investigated for the presence of cestode parasites. *Anomotaenia galbulae* (Gmelin, 1790) Furhrmann, 1932 was recovered from all the three host species. While, *Choanotaenia micracantha* was recovered only from *C. monedula* and no specimen of this cestode was obtained from *C. splendens* and *C. macrorhynchos* during the present study. The specimens thus collected were identified as *Anomotaenia galbulae* and *Choanotaenia micracantha* on the basis of various morphological and morphometric characters when compared to the known species of genera *Anamotaenia* and *Choanotaenia* respectively. However, some intraspecific variations were observed.

Key words: Cestode, Crows,

Effect of Dietary Inclusion of *Zataria multiflora* on Histological Parameters of Bursa of Fabricius in Broilers

**Original Article, C7**

Shomali T, Hamedi S, Paryani MR, Mohseni SM, Farzaneh M.

*J. World's Poul. Res.* 3(1):

ABSTRACT: Regarding the remarkable role of bursa of Fabricius as a primary lymphoid organ in poultry, this study aimed to evaluate the effect of long term administration of *Zataria multiflora* as an herbal immunomodulatory agent on histological features of this organ in broiler chickens. To this end, fifty, one-day old chickens were randomly divided into five equal groups and fed with diets contained 0.5, 1, 1.5, and 2% of *Z. multiflora* (experimental groups) or basal diet (control group) for 45 days. On day 46, birds were slaughtered and bursa of Fabricius was collected and used for histological examination. Bursa of Fabricius sections were stained with hematoxylin and eosin, and histomorphometric parameters such as thickness of follicular cortex, thickness of follicular mantle, number of follicles in plicae and number of lymphocytes in the follicular cortex were measured using a linear graticule. Number of follicles in plicae was also counted under light microscope. The results showed a dose dependent increase in all histomorphometric parameters due to *Z. multiflora* administration and the highest increase was in the thickness of follicular cortex of birds treated with 2% *Z. multiflora*.

In conclusion, dietary inclusion of *Z. multiflora* during the rearing period of broilers, dose dependently affects histological structures of bursa of Fabricius in a way that may enhance its role as a lymphoid organ.
