ABSTRACT: Animal production is an integral part of Ghana's agricultural economy and a major source of livelihood for many rural people. Accurate information on animal production is important for planners and other stakeholders to use this data in planning and making of policies, and to monitor changes that may occur overtime.

J. World's Poult. Res. 3(1):

ABSTRACT: The present study was undertaken to compare different diagnostic procedures for the detection of Newcastle disease and infectious Bursal disease in chickens with a view of identifying reliable, sensitive, specific and more accurate methods to detect the viruses for the confirmatory diagnosis of diseases.

Key words: Clinical diagnosis, NDV, IBDV, HI, AGIDT, RT-PCR assay.
Effect of substituting yellow maize for sorghum on broiler performance

Original Article, C3

Ahmed M.A., Dousa B.M. and Abdel Atti Kh.A.

J. World’s Poult. Res. 3(1): 13-17, 2013

ABSTRACT: An experiment was conducted to study the nutrient requirements of broilers when yellow maize replaces sorghum in the diet. The study was done on 240 one day old broiler chicks, randomly divided to 12 replicates of 10 birds each. The experiment lasted for 6 weeks. Feed intake and body weight gain had been recorded weekly. The results showed significant increase in body weight gain of broilers when yellow maize replaced sorghum in the diet. Key words: Broiler, Maize, Sorghum, Performance
Seroepidemiological studies on poultry salmonellosis and its public health importance

Rural poultry farming with improved breed of backyard chicken
ABSTRACT: Livestock and poultry rearing is an imperative factor for improving the nutritional security of rural poor in India. Rural farmers rear Desi type chicken with low egg and meat production in backyard system. For developing the rural poultry farming, improved breeds like Broiler, Broiler-Cross, and hybrids can be used as a solution to food security to the needy villagers paving a way for sustainable agriculture in rural areas of India.

A study on Cestode Parasites of Corvus species of Kashmir, India

Original Article, C6
Ahmad Dar J., Tanveer S., Ahmad Kuchai J. and Ahmad Dar Sh.
J. World's Poul. Res. 3(1): 28-34
### ABSTRACT:

During the present study, three species of the genus *Corvus* namely *Corvus monedula*, *C. splendens*, and *C. macrorhynchos* were collected from different localities of Kashmir valley and investigated for the presence of cestode parasites. *Anomotaenia galbulae* (Gmelin, 1790) Furhrmann, 1932 was recovered from all the three host species. While, *Choanotaenia micracantha* was recovered only from *C. monedula* and no specimen of this cestode was obtained from *C. Splendens* and *C. macrorhynchos* during the present study. The specimens thus collected were identified as *Anomotaenia galbulae* and *Choanotaenia micracantha* on the basis of various morphological and morphometric characters when compared to the known species of genera *Anomotaenia* and *Choanotaenia* respectively. However, some intraspecific variations were observed.

### Effect of Dietary Inclusion of *Zataria multiflora* on Histological Parameters of Bursa of Fabricius in Broilers

Regarding the remarkable role of bursa of Fabricius as a primary lymphoid organ in poultry, this study aimed to evaluate the effect of long term administration of *Zataria multiflora* as an herbal immunomodulatory agent on histological features of this organ in broiler chickens.

To this end, fifty, one-day old chickens were randomly divided into five equal groups and fed with diets contained 0.5, 1, 1.5, and 2% of *Z. multiflora* (experimental groups) or basal diet (control group) for 45 days. On day 46, birds were slaughtered and bursa of Fabricius ... using a linear graticule. Number of follicles in plicae was also counted under light microscope. The results showed a dose dependent increase in all histomorphometric parameters due to *Z. multiflora* administration and the highest increase was in the thickness of follicular cortex of birds treated with 2% *Z. multiflora*.

In conclusion, dietary inclusion of *Z. multiflora* during the rearing period of broilers, dose dependently affects histological structures of bursa of Fabricius in a way that may enhance its role as a lymphoid organ.
